AutoCAD r09.jpg (265.35 KiB) Viewed 8477 times Since its release, the software has been adopted in a wide range of industries, including architecture, civil engineering, construction, automotive, manufacturing, and mechanical engineering. AutoCAD is also used for the design of household items, such as motorcycles and automobiles, as well as for spacecraft. History AutoCAD was originally designed as a drawing program for the AutoCAD and MicroStation workstation products, but it eventually grew to include many other features. The first public version was AutoCAD for DOS (or AutoCAD DOS), which was released in December 1982,

and later included in the workstation AutoCAD. It ran on the CP/M operating system. AutoCAD for DOS used a command line interface, because the MicroStation DOS software was limited to DOS and no graphical user interface was available. The GUI evolved and was rewritten in 1987 to introduce new features. AutoCAD for Windows was released in February 1989 as a DOS-based application. The version released for DOS was 2.0. The first version for Windows, 3.0, was released in February 1992. After a decade of steady growth, the company's growth began to slow and the company announced that it would lay off employees and close some of its facilities. By October 2007, the company was bankrupt and laid off all employees at its headquarters in San Rafael, California. On August 31, 2008, the last remaining AutoCAD software development operation in California, in San Francisco, closed, laying off twenty of its fifty-two remaining employees. The company's remaining

development operation, in Portland, Oregon, survived the closing of the California operation. In July 2011, Autodesk acquired a majority stake in Corel. Corel later transitioned its technology products to the AutoCAD brand. In January 2013, Autodesk announced a management agreement with SSA Global to sell AutoCAD, as well as some other products, to SSA. The deal was structured as a prepackaged bankruptcy sale, in which Autodesk took the lead role while SSA Global, a holding company, was the passive bidder. The transaction closed on March 28, 2013. Autodesk retained some of the software's patents, but agreed not to assert its intellectual property against anyone who purchased AutoCAD. Features AutoCAD is primarily used to create 2D drafting

create a custom command, one must either use Autodesk Exchange Apps or include an installation of Visual LISP (VLPX). A more recent release introduced a new set of features in the 2017 Release of AutoCAD, which enables end-users to: create a new custom command from a JavaScript script or create a new command from the command palette (among other ways) create a command using an object and.NET or Visual LISP macros. create a new command from a custom UI (rather than a VLPX or Exchange App) A common way to create a command is to modify the python script which generates the command. This is easiest in VBA. Most files are saved in the text file.acad command format. In addition to modifying the script, the end user will typically need to modify the.acad file itself. A list of functions and arguments are documented on the help page for the tool. Geospatial Autocad supports 2D and 3D geospatial analysis and visualization. These functions are accessed via the

ArcToolbox. GIS Integration In the AutoCAD 2017 release, CAD is integrated with the ArcGIS platform, which allows users to create maps based on the location and surroundings of points, lines, and polygons. The new release of AutoCAD 2015 allows 2D and 3D maps to be created from the map. People Autodesk announced the death of AutoCAD software, along with other CAD software, on April 21, 2019. History AutoCAD was originally based on Micrografx's product called 2D Express, and the first commercial version was released on September 26, 1991, and is therefore often referred to as AutoCAD 1.0. Before its inception, AutoCAD was an evolving entity as many people worked on it in the early years. The CAD software developed by ADK, which is also the original version of the software, was derived from a system originally built by Micrografx called 2D Express, and then renamed to AutoCAD. The name Autodesk was chosen in 1995 after two months of online voting. The

company was originally called Artistic Integrated Designs (AID), and was renamed Autodesk in 1996. In 1997, Autodesk acquired CorelDRAW. In 2010, Autodesk acquired rival NavisWorks.

edits to your drawings from colleagues on a desktop PC, mobile device or tablet. You can keep on working while others review your drawing and collaborate on the revisions. (video: 1:37 min.) A third-party tool that synchronizes changes made on your drawings, including colors, layers, linetypes, and styles, to SolidWorks®. (video: 2:15 min.) Find and share capabilities: Find features and search in specific areas of your drawing. Find features with the Find in Area tool, find and share information with the Find in Graphics button and search the drawing for features with the Find tool. Stay up to date with the latest in CAD industry technologies. New feature: Create animation scenes for drawing review. Use animation scenes to view specific changes to your drawings in a sequence. For example, you can show all changes that were made to a drawing, or you can skip certain changes to reduce the time spent viewing changes. New feature: Show the part model or assembly in

an exploded view or make a single component the active or default drawing component when it's in a group. New feature: Change the default coordinate system for the Active Document. Specify a different coordinate system for the current drawing, or use the standard 0,0 coordinate system for any drawing from the start. New feature: AutoCAD® and PowerReview® view different settings in drawings. The default view settings for AutoCAD® and PowerReview® are now different, as are the layers to which you can apply effects and colors. See the AutoCAD® and PowerReview® Tasks help topics to learn more. New feature: Reorder layers by drag-and-drop. New feature: Color depth can be increased to 16-bit from 8-bit. New feature: Create a script to run any batch commands on a drawing and set the script to run automatically when a drawing is saved. New feature: Display objects in the most appropriate coordinate system for the layer they are located
