When reading about Photoshop features in books, magazines, and websites, keep in mind that they may not be applicable to all versions of Photoshop, and most of these features were added in Photoshop CS or later versions. Concepts Because Photoshop is such a large program, it has many features. This chapter lists the more critical Photoshop features and provides a basic overview of each. Photoshop's Interface Photoshop's interface is divided into many windows, which enables you to work on a single image or a batch of images simultaneously. Through windows you can do many things, including creating layers, modifying images, editing color, retouching images, and producing finished images. The Photoshop interface works with layers. Photoshop enables you to create and modify

these layers as separate objects. A layer is the basic element of a Photoshop image. It can store an image, a filter or special effect, or any combination of these functions. To modify a layer, you can change a layer's characteristics, such as color, size, or blending mode (explained in the later section "Layers: the building blocks of an image"). The layers are nondestructive; no matter what you do to them, they are still intact. You can always go back to a previous layer and change your modifications. Also, all layers can be combined into a single layer, a process that doesn't change a layer's original format (RGB, CMYK, or grayscale) or its original transparency. Images in Photoshop are stored in layers. You can create an image with a single layer or a combination of layers, which are like puzzle pieces that, when placed together, build up a complete image. Each of the following sections introduces some of the main Photoshop tools. The Layers palette The Layers palette, shown in Figure 1-1, has a tabbed interface. The tabs list several panels: the Layers panel, the Fill panel, the Levels panel, and the Adjustments panel. You can use any of these panels to create and modify layers, but depending on the task you're performing, you may find that one or more of the panels is better suited to the task. The following subsections describe these panels and provide more detailed information on their individual functions. The Layers panel enables you to manipulate a picture's layers. This panel includes two tabs: the open one, which displays the

currently selected layer, and the closed one, which doesn't contain any image

Q: How do I create an address book in python? I'm trying to create an address book using python but can't seem to get it working. Below is my code so far. I'm looking for some help, I would appreciate it. Name: import sys def add_person(n,f,m,l,p): name = input("What is your name? ") surname = input("What is your last name? ") address = input("What is your address? ") phone = input("What is your phone number? ") my_list = [name, surname, address, phone] if len(my_list) == 1: print("Name: " + f.get_name() + "Surname: " + m.get_surname() + "Phone: " + l.get_phone()) elif len(my_list) == 2: print("Name: " + f.get_name() + "Surname: " + m.get_surname() + "Address: " + address + "Phone: " + phone) elif len(my_list) == 3: print("Name: " + f.get_name() + "Surname: " + m.get_surname() + "Address: " + address + "Phone: " + phone) elif len(my_list) == 4: print("Name: " + f.get_name() + "Surname: " + m.get_surname() + "Address: " + address + "Phone: " + phone) else: print("Sorry, but there's no such entry") A: You have few errors in your code: import sys def add_person(name,surname,address,phone):

my_list = [name, surname, address, phone] if len(my_list) == 1: print("Name: ", name, "S
