(a) Field of the Invention The present invention relates to a method for correcting a calibration value in an image sensor, and more particularly, to a method for correcting a calibration value, which is used in a heterodyne-based image sensor. (b) Description of the Related Art An image sensor is formed of a plurality of photo sensing elements in which the number of the photo sensing elements is larger than the number of pixels in an image. The image sensor uses a structure in which the photo sensing elements are arrayed by being divided into each of a plurality of groups or a so-called Si photo diode ("Si PD") structure in which the photo sensing elements are arrayed by being divided into each of a plurality of areas. An image sensor of the Si PD structure has a calibration value of each of the areas. In general, the calibration value is set as a reference in determining an initial value of the respective photo sensing elements. In a case in which a structure is formed such that a single photo sensing element is used
