I'm following the docs instructions: But I cannot find anywhere instructions how to write a new service files. I've followed this tutorial: But I don't know where to put my code. Thanks A: ZK Service Files provide you several services which you may use to speed up your development and save time: ZK configuration service ZK registry service ZK service configuration service ZK bootstrap service Just as your question, the file structure is very simple and you don't need to make any changes in the basic one to use them. You can just put them in your src/main/java/ folder and they will work. You can read more about ZK Service Files from the official documentation. A DNA sequence of the infectious bursal disease virus (IBDV) glycoprotein gII gene has been determined. The open reading frame is 979 nucleotides in length and encodes a protein with 312 amino acid residues. The comparison of the amino acid composition of the protein of gII of the strains H52 and L48 and of the reference strain M41 with those of the IBDV strains V185/89, Australian and I180-0 revealed that the amino acid composition of gII was very similar among these strains. The nucleotide sequence comparison of the gene encoding the glycoprotein gII of the viruses isolated from different countries showed a homogeneity with the exception of the nucleotide sequence of the L48 strain.Two cases of tricholemmal cyst of the scalp with voluminous keratotic deposits.
