audience: graduate students, anyone intending to study the topic in depth. [] this is a book which is targeted at graduate level or above. we expect students to already have a working knowledge of the mathematics of statistics, but we would expect the student to be able to dive into the book without any prior mathematics background. the main goal of this book is to give an overview of basic statistics with examples and a practice-based approach. this approach is derived from the experience of many authors, who are all “coauthors” of this book. hence, some of the material may be easier to understand than in traditional books, but at the same time, we avoid all heavy mathematics. most of the issues and problems are realistic and are based on real-world challenges. many books and packages provide an idealistic overview of the topic, but we hope that this book serves as a good start for anyone who wants to learn statistics or even if they just want to learn more about r. we would also like to make this book accessible for learners with dyslexia. read more in this first example, we make a simple model to predict housing prices by demographics data. [] this example shows how to construct a linear regression model, a decision tree and a logistic regression model. we also use a neural network model to predict the price of a house. read more este libro es una introducción a aprendizaje automático y aplicado a datos colombianos [] este libro fue construido para ayudar a entender algunas herramientas en r de aprendizaje automático y aportar contenido en español. además, queremos aprovechar que actualmente, tenemos muchas bases de datos disponibles y de todo tipo. quisiera fomentar el análisis de datos para todos los que quieran, es una práctica libre y cualquiera, con conocimientos básicos de r y estadística, puede hacerlo. fue escrito por Danna Cruz y Luis Alejandro Msmela y siempre acompañados por Cantelli. read more

este libro es una introducción al aprendizaje automático y aplicado a datos colombianos [] este libro fue construido para ayudar a entender algunas herramientas en R de aprendizaje automático y aportar contenido en español. the purpose of this book is to develop the practice of R for statistics courses. [] this book was developed for R users, with little or no knowledge of statistics, to develop the skill of using R for statistics courses. R is used as a generic example. i do not intend to build a high-level introductory text on statistics. users already familiar with the language will have a good foundation in order to handle advanced topics. the book focuses on R programming. it does not try to explain the basic concepts of statistics. the book does not intend to build a high-level introductory text on statistics. users familiar with the language will be able to handle advanced topics. this book focuses on R programming. read more this book contains a unified treatment of practical topics in semiparametric regression [] this book treats a unified treatment of practical topics in semiparametric regression. we first consider both linear and non-linear regression methods, and illustrate inference procedures in semiparametric models. subsequently, we build on this approach to model dichotomous, polytomous, and survival outcomes in a single unified framework. the central theme of the book is to unify inference and inference procedures, with a particular emphasis on semiparametric models. for this reason, some statistics and statistical theory are presented. the main focus of the book is on real data and simulation studies, with application to the real world. the underlying technology includes graphical models, markov networks, mixture models, bayesian methods for both parametric and nonparametric models, and methods for dealing with missing data. read more 5ec8ef588b
