KEYMACRO is an efficient and accurate application. It enables you to type letters and sequences of the keyboard on any PC, also

providing you with the associated sound.
KEYMACRO can be used for: * Audio note taking * Typing, voice recording and emailing * Instant messaging and chatting * Playing and recording music * Learning new words and data * Audio file creation and editing * Checking the spelling * Text to speech * Talking to a computer * Uploading and downloading music * Sound quality test * Playing video games * Playing any other audio file * Signing and reading documents * Playing music as background music A cost-effective alternative to MP3 players

KEYMACRO has a very unique and amazing functionality: the connection to the keyboard can be automatically established using the PC's sound input system. Thus, if your

keyboard is connected to the PC, KEYMACRO can recognize the keyboard typing and respond accordingly. Moreover, the application features a very important and valuable feature, namely the support for recording the keyboard typing with the mouse click, which can easily become useful in computer applications such as recording a document and saving it with an associated sound. It is also worthwhile mentioning that KEYMACRO was developed by a professional programmer and an experienced team of audio-visual and computer audio professionals. As a result, the application is very simple to use and performs excellently. Moreover, KEYMACRO can be used for typing in any other system or application by

simply installing it on the computer to which you wish to connect. In this way, it becomes easy to type anything using the keyboard without having to type on the system's keyboard, including long sequences and special characters. KEYMACRO has a number of features that make it extremely user-friendly and efficient: * Automatic connection to keyboard: Keyboard detection is a very important feature for any application, especially for those seeking an audio alternative to MP3 players.

KEYMACRO's automatic connection to keyboard is especially useful in those cases where the connection is not managed directly by the user. For example, a working PC cannot be connected to the keyboard of

the computer which is to be used as a client. In this case, KEYMACRO's automatic detection of the keyboard enables you to take notes and use it in any application where an audio alternative is available. *

Easy to type: The keyboard mapping feature works on a 'click to type' basis, 2edc1e01e8
