What is hybrid system simulation? It is a software that simulates an engineered system that is composed of both continuous-time and discrete-time components. It is a type of simulation known as a hybrid system simulation. It is typically used in the aerospace, automotive, financial, control systems, power, and oil and gas industries. The software was created in order to help users design and build systems with an emphasis on rapid and accurate verification of hybrid models with a time-varying discrete system and a time-invariant continuous system. This software package comes with several modules that allow users to perform: Models can be created either as a continuous or hybrid system model. New functions can be added to the continuous model's function graph. Models can be compiled and run. It provides the features required to perform hybrid systems model simulations. QSS Solver For PC

QSS Solver is an all-in-one open source application for the Modelica language that offers a rapid and convenient way to simulate hybrid systems in Modelica. Programs can be created from the start or the source code of an existing file, like an example. One will be able to check the entire model from the source code or download the script for preview. One can execute the model and preview the simulation results on the user's desktop or save the simulation results in one of the supported formats. The solution offers three sections to which users can have access. These sections are: script editor, script editor/preview, graphic editor. More specifically, the Script editor/preview section will offer users access to a suite of Modelica language tools. Scripts can be written from the start or after having created the actual file. These scripts can be opened for editing or can be immediately used for running the model. The graphic editor section will offer users access to simulation results in terms of waveforms and graphs for easy display and interpretation. If your "mystery" caller was indeed trying to help you, I don't see why you would be offended. I know some people who hang up immediately when they get a "mystery" call, but I'm not that way. I like to talk to my "mystery" callers and let them know that I get their message. If they are trying to get my business, it might be worth it, otherwise, they have wasted their time. I also consider it a compliment when someone calls to tell me I'm on the right path, but I have to put some boundaries on what they can do for me to keep it from being spam. If I was offended, then I wouldn't be "mystery" calling, lol. I consider it my personal business coach. Well said Tania, and who wouldn't be offended if they were receiving anonymous calls on a topic they were already working on? Or if they received calls about their appearance, or a person, or a business? I have answered numerous 'mystery calls' and over the years learned to take a few things into consideration. I tell the 'caller' if it is a friend that I won't be home for a few days, my number being my cell number, and I ask them to write it
