There's lots to like in Lightroom 5. Not only is it faster than its predecessor, but it has some very useful new features, such as the ability to separate the deleted object into a separate album and make it available when you go to find it. The ability to specify an exact amount of blur on an image when you upload it and 9 new adjustments make Lightroom 5's editing much more sophisticated than any other application. Live Healing works extremely well. When a red spot appears in the Candles image, everything surrounding it becomes black; when that area is touched, the black disappears, the spot becomes white, and color and tonal values are restored. Live Filters also work very well. In the Lens Correction, you can see exactly how and where a problem area is located; and you can adjust the problem area so that it becomes less prominent. You can now save customized Shadows, Midtones and Highlights and adjust its color. Glossy Expert is just one of several new options that will help you control all of its shadows and highlights and adjust its color, which is now quite sophisticated. Prelight, Exposure, and Contrast, are now all editable. Colors are much better balanced and much easier to control. Darkroom 6 will let you use the features mentioned above, and include even more. It now also provides you with a standard sRGB profile, as well as separate profiles for Raw, JPEG, and TIFF images. And Lightroom 5's Adjustment Brush lets you achieve that perfectly-reproducible look in a few seconds.

Adobe's deep learning solutions are powered by the Adobe Sensei machine-learning engine, which can identify up to 40 different objects in an image, detect faces, describe people and common editing styles, recognize the mood of a scene, and tag particular images based on content. An example of these technologies is the face detection and recognition system, which appears when it detects someone in a photo. Technology is trained to identify who is in the image based on their appearance, age, gender, and ethnicity. In this instance, the photo is from the photographer at the time of the image capture (it was taken during a photoshoot).
