From the moment I first saw the iPad Pro, I wanted it for my photography projects. Unfortunately, it was Apple's decision to go with the 12.9 MP form factor, despite its lower true resolution (216 x 144 versus 8.6 MP). And I think the compromises were the 16:9 aspect ratio, 3:2 crop and 2-megapixel crop on the iPad Pro compared to its 5 MP resolution on 9.7-inch iPad Air 2. There are a number of tools in Photoshop to help colour-saturated images, especially photographers looking to work with vibrant colours. There are several reasons why you would want to work in the Saturation palette. When applied to a photo, the highlights in the Saturation palette will help maintain the original headroom of highlights. This particular colour range is called the Tapalette region (Web, Saturation, Tapalette), and for a more detailed talk about the Tapalette region, you can sign up for my 3D & Dimension webinar "Separating an Image into Its Parts: A Useful Tool for Depth, Saturation, and Tint."
